

iView Display units are the industry standard for quality, durability and visual appeal. Units are available in vertical and horizontal display orientation and can include integrated iBox® digital signage media player capabilities. Whether your objective is to display current events and schedules or show up-to-date rates and announcements about your products and services, iView Display units can be customized to meet your communication needs.

iView Display units are managed with inLighten's online iBox Manager® interface. Users can upload, schedule and distribute powerful digital signage content to one or more iView Display units.

iView Display units can present content created using a variety of standard graphic software or one of inLighten's specialized web or desktop content management solutions. In addition, iView Display units may be equipped to display live video, cable or satellite programming and incorporate a variety of other external content using specialized interfaces.
